

Prefer/Avoid Aircraft Bidding

The **Prefer/Avoid Aircraft** preference in PBS will offer you a greater number of aircraft specific options.

Example: If a Flight Attendant wishes to select pairings that have 319 legs, they may now select **Prefer Aircraft: 319**.

When using **Prefer Aircraft** to select a specific aircraft, it will show only pairings that have the selected aircraft as a working leg. This could be a pairing purely with the selected aircraft or could be a mixed pairing that has only a single working leg on that aircraft. Oppositely, using **Avoid Aircraft** will remove all pairings that operate the selected aircraft from the layers pairing pool even if the aircraft is only used on a single working leg. When using this preference, it will be important to review your pairing pools to make sure that those pairings reflect your **Prefer/Avoid** preference.

In either *Prefer* or *Avoid* preference, deadheads are not included in this property.

The complete list of aircraft for which you can select within the prefer/avoid bid preference is:

- 319
- 320
- 321
- 321-NEO
- 737
- 737-MAX
- 777-300
- 777-200
- 787-8
- 787-9

At this time, you will notice that the aircraft types are not named in a way that is consistent with your bid packet or other apps. Further enhancements will be forthcoming.

IMPORTANT: This is a significant change within the preferences of this property. If you had a “*Prefer Aircraft*” or “*Avoid Aircraft*” preference in your **Standing Bid**, those preferences have been deleted. You will need to update your Standing Bid tab with the new “*Prefer Aircraft*” or “*Avoid Aircraft*” preferences in your Standing Bid if this was part of your Standing Bid.
